

LM Envision: A unified observability platform

Bring together comprehensive monitoring capabilities and enable observability across data centers, public/private clouds, and applications. Gain correlation, context and clarity to understand business impact and causes of complex IT incidents.

Clarity across hybrid enterprise IT

Drive insight, confidence and action

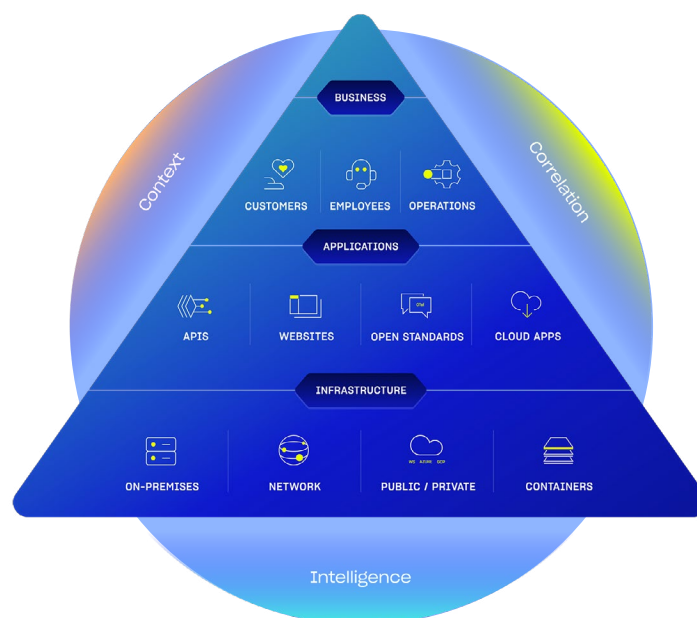

ITOps & DevOps unification

Resolve incidents faster with a single pane of glass

Increased innovation and operation efficiency

IT transformation success without risk

Explore the benefits of LM Envision

Reduce cost and risk by consolidating monitoring across IT infrastructure and applications

Resolve problems instantly with a single source of truth across DevOps & ITOps teams

Centralize capabilities built for enterprise scale and innovation in a single platform

Gain predictive insights by analyzing IT data in real-time for anomaly detection

One Platform. Your entire stack.

- Infrastructure Monitoring • Network Monitoring • Cloud Monitoring • Log Analysis • Server Monitoring
- Remote Monitoring • Database Monitoring • Container Monitoring • Application Performance Monitoring
- Storage Monitoring • Synthetics • Virtual Machine Monitoring
- + Powerful AIOps Early Warning Detection
- + A library of 2,000+ modules and ecosystem integrations
