

# Secure, Compliant Observability for Public Sector

## A Smarter Approach to Federal IT Operations

Federal civilian agencies are managing increasingly complex hybrid environments while operating under strict budget constraints, compliance mandates, and limited staffing. Disconnected tools and manual processes make it difficult to maintain visibility, respond quickly to issues, and support mission-critical services.

LogicMonitor, a FedRAMP Moderate Authorized platform, helps agencies transition to proactive operations by unifying observability and applying AI-driven automation across hybrid environments. With the LogicMonitor platform, teams gain a single platform that connects data, context, and action, enabling faster issue resolution, more efficient operations, and stronger support for security and compliance initiatives.

### How It Works

- **Unified, service-aware visibility:**  
Brings together telemetry across infrastructure, applications, and external Internet dependencies to provide clear operational context.
- **Intelligent signal prioritization:**  
Filters noise and highlights issues based on impact, enabling faster understanding and response.
- **Automated incident response workflows:**  
Connects detection, diagnosis, and action to reduce reliance on manual intervention.
- **Continuous operational insight:**  
Maintains real-time awareness of system performance and compliance posture.

This enables the shift toward proactive IT operations to support mission-readiness.

## Outcomes that Support Mission Delivery

Improve service reliability for mission-critical systems

Strengthen compliance and security readiness

Lower the overall cost of IT operations while maintaining reliability

Increase team capacity without adding headcount

## Why LogicMonitor

- 1 Built for federal hybrid environments, supporting modernization across legacy, on premises, and cloud systems.
- 2 Consolidates visibility and operations into a single platform, reducing complexity and fragmentation.
- 3 Helps agencies balance cost efficiency with reliability and compliance requirements.
- 4 Differentiated by an AI-driven, closed-loop operating model that connects insight directly to action.

### Modernize Federal IT Operations

See how you can simplify hybrid operations, improve system reliability, and support compliance goals.
