

From Reactive to Autonomous Healthcare IT

Healthcare IT leaders are expected to keep clinical services reliable while managing hybrid complexity, financial pressure, and limited team capacity. Disconnected tools and manual processes make it difficult to keep clinical systems running without disruptions.

Disconnected monitoring can delay issue detection until clinical operations are affected, increasing the risk of outages and data inconsistencies.

LogicMonitor helps healthcare IT teams reduce risk to clinical services by unifying visibility, context, and action across hybrid environments and EHR systems. With AI-driven insight, service-aware monitoring, automation, and continuous performance visibility, IT teams can improve reliability and operate with greater confidence.

How it Works

- **Unified, end-to-end visibility:** Connects infrastructure, cloud, EHR systems, logs, imaging equipment, and Internet dependencies to eliminate blind spots and help teams ensure clinical service performance.
- **AI-driven prioritization and correlation:** Reduces noise and highlights issues based on impact to patient-critical services for efficient responses.
- **Service-aware insight:** Links resource health to service impact so teams can understand which systems, workflows, or users may be affected.
- **Automated workflows:** Connect detection, diagnosis, escalation, and action to reduce manual effort and speed response.

OUTCOMES THAT SUPPORT HEALTHCARE SYSTEMS

Reliably run always-on clinical and EHR systems at scale

Ensure reliable HL7 data integration

Prevent clinical outages and network interruptions

Expand services without straining IT operations

Why LogicMonitor

- 1 Supports complex hybrid healthcare IT environments, from legacy systems and connected medical devices to on-prem and cloud resources.
- 2 Reduces operational toil and alert fatigue so teams can spend more time driving digital transformation across hospitals and clinics.
- 3 Helps healthcare systems improve service reliability, ensure interoperability, and maintain compliance while optimizing costs and resources.
