

IT Cost Optimization

Control Cloud Costs and Simplify IT Operations

Organizations are under growing pressure to reduce IT spending while supporting increasingly complex hybrid and multi-cloud environments. Fragmented monitoring, cloud management, and reporting tools make it difficult to identify cost drivers and waste.

Without clear visibility, cloud costs can grow unchecked, budgets become harder to manage, and teams spend valuable time switching between tools instead of delivering strategic initiatives. Uncontrolled costs delay initiatives and reduce operational efficiency.

LogicMonitor helps organizations gain visibility into both operational performance and cost drivers within a unified platform. By reducing tool sprawl, identifying cloud cost optimization opportunities, and providing insight into cloud spending trends, organizations can control costs while maintaining reliability and performance.

How it Works

- Unifies observability and cloud cost data to provide visibility into spending, utilization, and operational performance.
- Identifies idle, underutilized, or oversized resources to help teams reduce waste while maintaining reliability.
- Improves budget predictability by forecasting spend and highlighting budget risks early.
- Consolidates monitoring and operational insights into a single platform, reducing complexity and tool sprawl.

KEY OPTIMIZATION OUTCOMES

Lower overall IT operating costs

Reduce cloud spend and improve budget predictability

Consolidate overlapping tools for more efficient operations

Reduce operational risk and maintain service reliability

Why LogicMonitor

- 1 Brings observability and cloud cost management together in a single platform, helping teams connect performance and spending decisions.
- 2 Provides visibility across infrastructure, applications, services, and cloud resources to support organization-wide IT cost optimization efforts.
- 3 Combines spend forecasting, budget visibility, and optimization recommendations to help teams proactively manage cloud costs.
- 4 Reduces operational overhead by replacing fragmented tools with a unified platform.

Trusted By

TOPGOLF 10:1 consolidated 10 tools into a single platform

Take control of IT costs without sacrificing performance

Identify cost-saving opportunities, reduce tool sprawl, and improve budget predictability across your IT environment.
